

OFF-SITE BUILDINGS

OFF-SITE UPGRADED FLATPACK

THE SOLUTION FOR OPEX
ACCOMMODATION AND OFFICES

THE FLATPACK CONCEPT

THE COLLAPSIBLE CONTAINER

Developed for temporary use in remote and inaccessible deployment areas and destinations, the FlatPack system is an easy-to-transport solution to all your accommodation problems.

ECONOMICAL AND SPACE-SAVING

Up to 8 FlatPacks can be transported per truck. The ISO dimensions also mean that they are easily carried by ship or plane.

EASY TO ASSEMBLE

The structure's screw system is designed for two-storey assembly and guarantees quick and easy installation.

MODULAR SYSTEM

If required, the system can be combined on site with adaptive protective equipment, a hybrid solar system and toilet/washroom facilities.

The advantage for you is that you can obtain all these options from one source: ProContain.

LOGISTICALLY INGENIOUS

Within just 9 days, a temporary container building can be constructed from 60 collapsible Flatpack units, and is fully functional and ready to use. Removal is also simple: The containers can be dismantled again in a few steps and then taken away.

DAY 1
Delivery and start of assembly

DAY 9
Completion and moving in

A SYSTEM FOR ANY APPLICATION

MODULAR EXTENSION OPTIONS

The FlatPack system can also be used for special deployments in the field of disaster response, at major events and for public safety applications.

ADAPTIVE PROTECTION :

Using an adaptive protection system, protection can be achieved up to level FB7. The advantage to you is that because of the modular design system, only the external surfaces of the building are protected. This cuts costs, makes transport easier and shortens assembly/dismantling times.

HYBRID SOLAR POWER SYSTEM :

The combination of solar cells and an innovative energy storage system makes the ProFlatPack system **up to 85% independent** of external energy sources.

FRESH WATER AND WASTE WATER TANK SYSTEMS :

The available extensions with fresh water and waste water tanks plus the relevant stair and platform units allow the **systems to be used as independently as possible.**

XXL FLATPACK :

You need more space?

We are the only manufacturer in the world also to offer our FlatPack system as a **30-foot module (9.144m)** in a self-supporting version. This enables you to create large spaces such as training, meeting and catering spaces in the area of use.

POSSIBLE COMBINATIONS

UNLIMITED POSSIBILITIES

An 130 m² office energetically autonomous, a 24 pax in only 100 square meter or an accomodation with sanitary facilities ? Just ask us !

FLATPACK VERSATILITY

IN NEED FOR TECHNICAL DETAILS ? FLOOR PLANS AND MODEL RANGE ?

Would you like to find out more about the possibilities of the FlatPack system? Our experts can tell you about all the important details and provide a non-binding offer.
